Wyse T50

New standards for entry level thin clients

The Fastest, Most Efficient and Affordable Linux-based Thin Client for Cloud Client Computing Deployments

The new Wyse T50 delivers excellent Web, Citrix, Microsoft, and VMware VDI user experience, all through an elegant and intuitive user interface. Even on a small budget, the Wyse T50 delivers the best multimedia and management capabilities in its class.

Wyse T50 is powered by Wyse-enhanced Linux, delivering a simpler user interface and a "plug and display" start-up of less than 20 seconds. Wyse T50 thin client also creates a rich user experience displaying vibrant multimedia and Flash in VDI and the local browser. The Wyse-enhanced Linux firmware is verified Citrix Ready® for Citrix Receiver™ with HDX, and features certification with VMware View Open™ Client. Wyse T50 also supports the RDP7 protocol and offers such advanced features as Wyse Collaborative Processing Architecture media redirection and bitmap compression.

At the heart of the Wyse T50 lies the Marvell® ARMADA™ PXA 510 application processor, an ARMv7 CPU running at 1GHz frequency, delivering a 150 percent performance improvement compared to previous ARM based designs.

The Wyse T50 also includes the same automatic configuration and management used in Wyse's premium thin and zero clients, eliminating the need for manual utilities and wizards.

Take a closer look at the future of cloud client computing:
